

Sections

Mandatory

- There is a rendering (in the git repository)
 - No cheating, both students must be able to explain their code.
 - The project is good in swift 2.0+ and runs with XCode 7.0+. If an element of this list is not respected, the notation stop there. Use the appropriate flag. You are encouraged to continue to discuss the project, but the scale is not applied.
-

Compilation

Check that the project compiles and that the simulator starts correctly.
If this is not the case, the correction stops.

Views

Check that two minimum views are present: a view where the search for a login can be done, and the other where a user's dashboard is available.

API

Check that the latest available API is used.

Search User

Check with several logins that this view works:

First with a student login, then with a login staff type NS, Thor who does not fill no project and finally with a login that does not exist (notation 1/3/5).

Rate it from 0 (failed) through 5 (excellent)

Dashboard -> View Profile

Check that the user information is present. At least four informations must be displayed as well as the photo.

Rate it from 0 (failed) through 5 (excellent)

Dashboard -> Skill

Check that the skills are all present with their levels.

Dashboard -> Projects

Check that the projects or the user has been registered are present with their percentages whether they are successful or not.

Autolayout

Check that the application runs under all iPhone versions available under iOS 9+. (i.e. iPhone 4s, 5, 5c, 5s, 6, 6plus, 6s, 6s plus.)

Token API

Check that a token is not created for each request.

Bonus

Custom Cell

Check that customs cells have been used to customise their tableView.
bonus

Are other bonuses available (other information, is it beautiful, ergonomic, etc ...)
Rate it from 0 (failed) through 5 (excellent)
